

Ericsson in the US

Ericsson has been connecting the United States for nearly 120 years. As a trusted partner to all the major service providers and many regional carriers across the country, we are committed to supporting the market through our gamechanging technology and services. The US is Ericsson's largest market, and we have been strengthening our investments to be even closer to our customers and meet their accelerated 5G deployment plans. Ericsson has five live 5G networks in the US, and globally we power 79 commercial 5G live networks on five continents.

7,520 US employees	1,900 US field services employees	30+ US locations	4 US R&D locations
5 training centers of excellence	800+ tower climbers to accelerate network builds	\$100M 5G smart factory investment in Lewisville, TX	
1st to launch 5G with all Tier-1 service providers in the US	50,000 career enhancement opportunities in the next five years in the US		7 5G Core contracts in the US

Key investments in the US

We have made a \$100M investment in our smart factory located in Lewisville, TX. This 300,000 square-foot, state-of-the-art factory is assembling 5G radio base stations, putting Ericsson's 5G equipment supply chain close to our US customers.

Ericsson's five Centers of Excellence in the US have trained and certified more than 3,900 crew members since 2015. We are partnering with industry associations, US service providers and the Department of Labor to build a resource funnel for new tower workers—to accelerate US 5G deployment.

Our Austin Application-Specific Integrated Circuit (ASIC) design and R&D center helps maintain Ericsson's leadership position in 5G technology. ASICs and software developed in Austin will be instrumental in the global 5G mobile telecommunications infrastructure.

Ericsson D-Fifteen is our innovation center in the heart of Silicon Valley. It brings multiple core capabilities together under one roof, combining the company's collaborative spirit with leading technologies to provide a highpowered platform for building impactful and unique solutions, driven by co-creation and innovative partnerships.

Our acquisition of Boise, Idaho-based Cradlepoint, the US-based market leader in Wireless WAN Edge 4G and 5G solutions for the enterprise market, is a key investment to our ongoing strategy of capturing market share in the rapidly expanding 5G enterprise space.
