Mobile Command Center at the Tactical Edge
## The Dell Technologies Difference

Get to where you're needed, deploy faster, serve more effectively.

Traditional command vehicles are not always suited to challenging environments. Add the problems of disparate components, sluggish deployment, and the need for specially-trained operators, and the "bigger is better" mindset begs rethinking.

Enter the Nomad GCS Tactical Command Vehicle (TCV), powered by Dell Technologies. The ideology is simple: Eliminate complexity, create no separate systems. This fully-integrated platform has proven successful in defense, public safety, UAS, utility, telecom, and other applications worldwide. It is simply the most capable, best-connected, mobile operations platform in the world.

Turnkey Solution Bundles to Meet Your Mission

- Multiple connectivity solutions, including on-the-move satellite
- Interoperable voice, video, and data systems
- Off-pavement and off-grid capable for the most challenging operations
- Deploys quickly and safely by anyone, with minimal training

- Bundled services including on-site deployment
- Simplified purchasing through single product SKU
- Lower deployment time and costs
